

FOR2372 Kolloquium (WS 2017/2018)

Montags von 14.00 bis 16.45 Uhr

15. Januar Beginn 14.15 Uhr	Projekt 1 (AG König): <i>Biosynthesis and structural modifications of the selective Gq protein inhibitor FR900359 in Ardisia crenata</i>
	Projekt 2 (AG Imhof): <i>Synthesis and characterization of macrocyclic peptide inhibitors of the Gα protein family</i>
	Projekt 3 (AG Gütschow): <i>Development and characterization of heterocyclized dipeptide derivatives as inhibitors for heterotrimeric G proteins</i>
22. Januar	Projekt 4 (AG Müller): <i>Probes and inhibitors for heterotrimeric G Proteins: synthesis, characterization and application</i>
	Projekt 5 (AG Tietze): <i>Towards understanding structural and dynamical determinants of G protein inhibition - rational design of novel subtype specific G protein inhibitors</i>
	Projekte 6 & 7 (AG Kostenis): <i>Molecular modes of action and application of cell permeable inhibitors for heterotrimeric G proteins</i>
29. Januar	Projekt 8 (AG Pfeifer): <i>Gq-dependent signaling in adipose tissue - focus on brown adipocytes</i>
	Projekt 9 (AG Fleischmann/Wenzel): <i>Direct pharmacological G protein modulation in the lung</i>
	Strategisches – FOR Verlängerung
